

Posting to del.icio.us (<http://del.icio.us>)

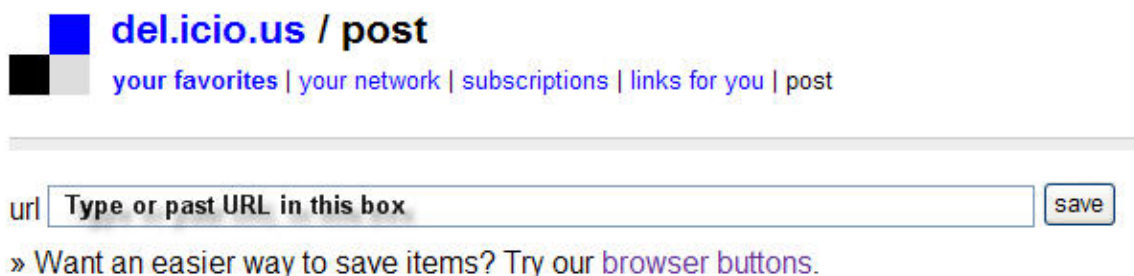

Social book marking sites allow you to save your favorite bookmarks to the internet where you can retrieve them from any other computer on the Internet. You can also annotate your bookmarks as well as organize them with “tags”. Tagging is a way to label the bookmark so that you can find it later or search for other sites with similar “tags”. As this is a form of “social-software”, you can share you favorite bookmarks with others as well as search items saved by other users of del.icio.us.

How to post to del.icio.us.

1. Log into <http://del.icio.us>
2. Use the del.icio.us buttons (if installed) or simply click “post”

3. Enter the URL for the site you would like to save to del.icio.us. You can do this by typing the address directly into the URL box or by using copy/paste (ctrl C/ctrl V) to copy from a website into the URL box.
4. Click Save

Turn over for remaining instructions

del.icio.us posting continued

5. Complete the description, notes and tag information.
6. Click Save

The **description** will show on the page below a listing of the site that you have saved and will allow you to get a quick idea about the content of the site. The more descriptive, the better

TAGS are a way to organize the information. You can list multiple tags by simply placing a space between the tags. Examples : SocialSoftware is one tag while Social Software is two tags- (one for Social and one for Software). The tags allow you to group URL's under multiple listings as well as search del.icio.us for sites posted by others with similar tags.
